Flower2Flower – Phase 1

Phase 1 is the Minimum Viable Product (MVP) for the Shipra pilot. It covers the essential end-to-end process: user registration and KYC, nirmalya collection, points management, manure inventory, marketplace sales, security and pilot reporting.

1. Platform and Foundation

Responsive Progressive Web App (PWA) frontend using ReactJS

Core backend and database using .NET and MySQL

Role-based access control

English and Hindi interface

Accessibility basics

Feedback button

Audit log

Object storage for media

2. User Onboarding and KYC

Mobile number registration with OTP

KYC documents (manual)

18+ age verification

Consent capture and consent log

Assisted registration by operator

User profile

Society pooled points

3. Temple Registry

Temple registration for registered and unregistered temples

Basic temple profile

Temple KYC documents (manual)

Temple verification workflow and badges

4. Collection (Operator App)

Devotee lookup by mobile number

Waste type selection

Manual weight entry with confirmation

Proof of Purity photo

Reject contaminated deposits

Rejection threshold flag

Offline mode with synchronisation

Daily collection summary for operators

5. Points and Loyalty

Immutable points ledger

Configurable earning rules

Levels with configurable multipliers

Points balance and history

Redemption requiring verified KYC

Held points management

6. Marketplace

Product catalogue

Cart and checkout in INR (MOCK)

Pay with points

Pickup at temple or delivery choice

Order management

7. Nursery and Inventory

Batch creation when waste arrives at the processing unit

Batch status tracking

Output weight and sellable stock update

8. Security and Compliance

Encryption of mobile numbers and KYC data

Masked data for non-admin roles

Simple threshold-based anomaly alerts

Restricted, audit-logged data export

9. Reporting and Analytics

Admin KPI dashboard

Carbon offset metric

User retention metric

Phase 1 Summary

Module	Feature Count
Platform and Foundation	10
User Onboarding and KYC	13
Temple Registry	5
Collection (Operator App)	9
Points and Loyalty	6
Marketplace	6
Nursery and Inventory	3
Growth and Engagement	2
Security and Compliance	4
Reporting and Analytics	3
Total	**61**

Phase 1 Scope Objective

Deliver a working pilot that allows devotees to register and complete KYC, deposit eligible nirmalya, pay the charge for broken idols where applicable, earn and view points, track processing batches, and purchase available manure products. Administrators and operators will have the basic tools needed to manage collection, user verification, inventory, orders, security and pilot performance.
